1. INTRODUCTION OF THE ONLINE FOOD ORDERING SYSTEM

The "Online Food Ordering System" has been developed to override the problem prevailing in the practicing manual system. This software is supported to eliminate and, in some cases, reduce the hardships faced by this existing system. Moreover, this system is designed for the particular need of the company to carry out operations in as moot and effective manner. The application is reduced as much as possible to avoid errors while entering the data. It also provides error message while entering invalid data. No formal knowledge is needed for the user to use this system. Thus, by this all it proves it is user-friendly.

Online Food Ordering System, as described above, can lead to error free secure, reliable and fast management system. It can assist the user to concentrate on their other activities rather to concentrate on the record keeping. Thus, it will help organization in better utilization of resources. Every organization, whether big or small, has challenges to overcome and managing the information of Category, Food Item, Order, Payment, Confirm Order.

Every Online Food Ordering System has different Food Item needs; therefore, we design exclusive employee management systems that are adapted to your managerial requirements. This is designed to assist in strategic planning and will help you ensure that your organization is equipped with the right level of information and details for your future goals. Also, for those busy executives who are always on the go, our systems come with remote access features, which will allow you to manage your workforce anytime, at all times. These systems will ultimately allow you to better manage resources.

2. ABSTRACT OF THE PROJECT ONLINE FOOD ORDERING SYSTEM

The purpose of Online Food Ordering System is to automate the existing manual system by the help of computerized equipment's and full-fledged computer software, fulfilling their requirements, so that their valuable data/information can be stored for a longer period with easy accessing and manipulation of the same. The required software and hardware are easily available and easy to work with. Online Food Ordering System, as described above, can lead to error free, secure, reliable and fast management system. It can assist the user to concentrate on their other activities rather to concentrate on the record keeping. Thus it will help organization in better utilization of resources.

The organization can maintain computerized records without redundant entries. That means that one need not be distracted by information that is not relevant, while being able to reach the information. The aim is to automate its existing manual system by the help of computer and full-fledged computer software, fulfilling their requirements, so that their valuable data/information can be stored for a longer period with easy accessing and manipulation of the same. Basically the project describes how to manage for good performance and better services for the clients.

3. OBJECTIVE OF REPORT ON ONLINE FOOD ORDERING SYSTEM

The main objective of the Project on Online Food Ordering System is to manage the details of Food Item, Category, Customer, Order, Confirm Order. It manages all the information about Food Item, Payment, Confirm Order, Food Item. The project is totally built at administrative end and thus only the administrator is guaranteed the access. The purpose of the project is to build an application program to reduce the manual work for managing the Food Item, Category, Payment, Customer. It tracks all the details about the Customer, Order, Confirm Order.

Functionalities provided by Online Food Ordering System are as follows: Provides the searching facilities based on various factors. Such as Food Item, Customer, Order, Confirm Order Online Food Ordering System also manage the Payment details online for Order details, Confirm Order details, Food Item. It tracks all the information of Category, Payment, Order Manage the information of Category Shows the information and description of the Food Item, Customer To increase efficiency of managing the Food Item, Category It deals with monitoring the information and transactions of Order. Manage the information of Food Item Editing, adding and updating of Records is improved which results in proper resource

4. SCOPE OF REPORT ON ONLINE FOOD ORDERING SYSTEM

It may help collecting perfect management in detail. In a very short time, the collection will be obvious ,simple and sensible. It will help a person to know the management of passed year perfectly and vividly. It also helps in current all works relative to Online Food Ordering System. It will be also reduced the cost of collecting the management & collection procedure will go on smoothly. Our project aims at Business process automation, i.e. we have tried to computerize various processes of Online Food Ordering System. In computer system the person has to fill the various forms & number of copies of the forms can be easily generated at a time In computer system, it is not necessary to create the manifest but we can directly print it, which saves our time.

To assist the staff in capturing the effort spent on their respective working areas. To utilize resources in an efficient manner by increasing their productivity through automation. The system generates types of information that can be used for various purposes. It satisfy the user requirement Be easy to understand by the user and operator Be easy to operate Have a good user interface Be expandable Delivered on schedule within the budget.

5. REPORT OF ONLINE FOOD ORDERING SYSTEM

It generates the report on Food Item, Category, Payment Provide filter reports on Customer, Order, Confirm Order You can easily export PDF for the Food Item, Payment, Order Application also provides excel export for Category, Customer, Confirm Order You can also export the report into csv format for Food Item, Category, Confirm Order.

5.1. MODULES OF ONLINE FOOD ORDERING SYSTEM

- Food Item Management Module: Used for managing the Food Item details.
- Confirm Order Module : Used for managing the details of Confirm Order.
- Payment Module : Used for managing the details of Payment Category
- Management Module: Used for managing the information and details of the Category.
- Customer Module : Used for managing the Customer details
- Order Module : Used for managing the Order information's
- Login Module: Used for managing the login details
- Users Module : Used for managing the users of the system

6. INPUT DATA AND VALIDATION OF ONLINE FOOD ORDERING SYSTEM

All the fields such as Food Item, Customer, Confirm Order are validated and does not take invalid values Each form for Food Item, Category, Payment cannot accept blank value fields Avoiding errors in data Controlling amount of input Integration of all the modules/forms in the system. Preparation of the test cases. Preparation of the possible test data with all the validation checks. Actual testing done manually. Recording of all the reproduced errors. Modifications done for the errors found during testing. Prepared the test result scripts after rectification of the errors. Functionality of the entire module/forms.

Validations for user input. Checking of the Coding standards to be maintained during coding. Testing the module with all the possible test data. Testing of the functionality involving all type of calculations etc. Commenting standard in the source files. The software quality plan we will use the following SQA Strategy: □ In the first step, we will select the test factors and rank them.

The selected test factors such as reliability, maintainability, portability or etc., will be placed in the matrix according to their ranks. The second step is for identifying the phases of the development process. The phase should be recorded in the matrix. The third step is that identifying the business risks of the software deliverables. The risks will be ranked into three ranks such as high, medium and low.

7. FEATURES OF ONLINE FOOD ORDERING SYSTEM

Product and Component based Creating & Changing Issues at ease Query Issue List to any depth Reporting & Charting in more comprehensive way User Accounts to control the access and maintain security Simple Status & Resolutions Multi-level Priorities & Severities. Targets & Milestones for guiding the programmers Attachments & Additional Comments for more information Robust database back-end Various level of reports available with a lot of filter criteria's It contains better storage capacity. Accuracy in work. Easy & fast retrieval of information. Well-designed reports. Decrease the load of the person involve in existing manual system. Access of any information individually. Work becomes very speedy. Easy to update information.

8. FEASIBILITY STUDY OF ONLINE FOOD ORDERING SYSTEM

After doing the project Online Food Ordering System, study and analyzing all the existing or required functionalities of the system, the next task is to do the feasibility study for the project. All projects are feasible - given unlimited resources and infinite time. Feasibility study includes consideration of all the possible ways to provide a solution to the given problem. The proposed solution should satisfy all the user requirements and should be flexible enough so that future changes can be easily done based on the future upcoming requirements.

A. ECONOMICAL FEASIBILITY: This is a very important aspect to be considered while developing a project. We decided the technology based on minimum possible cost factor. All hardware and software cost has to be borne by the organization. Over all we have estimated that the benefits the organization is going to receive from the proposed system will surely overcome the initial costs and the later on running cost for system.

B. TECHNICAL FEASIBILITY: This included the study of function, performance and constraints that may affect the ability to achieve an acceptable system. For this feasibility study, we studied complete functionality to be provided in the system, as described in the System Requirement Specification (SRS), and checked if everything was possible using different type of frontend and backend.

C. OPERATIONAL FEASIBILITY: No doubt the proposed system is fully GUI based that is very user friendly and all inputs to be taken all self-explanatory even to a layman. Besides, a proper training has been conducted to let know the essence of the system to the users so that they feel comfortable with new system. As far our study is concerned the clients are comfortable and happy as the system has cut down their loads and doing.

9. SYSTEM DESIGN OF ONLINE FOOD ORDERING SYSTEM

In this phase, a logical system is built which fulfils the given requirements. Design phase of software development deals with transforming the client's requirements into a logically working system. Normally, design is performed in the following in the following two steps:

1. **PRIMARY DESIGN PHASE:** In this phase, the system is designed at block level. The blocks are created on the basis of analysis done in the problem identification phase. Different blocks are created for different functions emphasis is put on minimizing the information flow between blocks. Thus, all activities which require more interaction are kept in one block
2. **SECONDARY DESIGN PHASE:** In the secondary phase the detailed design of every block is performed. The general tasks involved in the design process are the following:
 - Design various blocks for overall system processes.
 - Design smaller, compact and workable modules in each block.
 - Design various database structures.
 - Specify details of programs to achieve desired functionality
 - Design the form of inputs, and outputs of the system.
 - Perform documentation of the design.
 - System reviews.

10. USER INRRERFACE DESIGN

User Interface Design is concerned with the dialogue between a user and the computer. It is concerned with everything from starting the system or logging into the system to the eventually presentation of desired inputs and outputs. The overall flow of screens and messages is called a dialogue .The following steps are various guidelines for User Interface Design:

- I. The system user should always be aware of what to do next.
- II. The screen should be formatted so that various types of information, instructions and messages always appear in the same general display area.
- III. Message, instructions or information should be displayed long enough to allowthe system user to read them.
- IV. Use display attributes sparingly.
- V. Default values for fields and answers to be entered by the user should be specified.
- VI. A user should not be allowed to proceed without correcting an error
- VII. The system user should never get an operating system message or fatal error.

11. PRELIMINARY PRODUCT DESCRIPTION

The first step in the system development life cycle is the preliminary investigation to determine the feasibility of the system. The purpose of the preliminary investigation is to evaluate project requests. It is not a design study nor does it include the collection of details to describe the business system in all respect. Rather, it is the collecting of information that helps committee members to evaluate the merits of the project request and make an informed judgment about the feasibility of the proposed project. Analysts working on the preliminary investigation should accomplish the following objectives: Clarify and understand the project request Determine the size of the project. Assess costs and benefits of alternative approaches. Determine the technical and operational feasibility of alternative approaches. Report the findings to management, with recommendations outlining the acceptance or rejection of the proposal. Benefit to Organization The organization will obviously be able to gain benefits such as savings in operating cost, reduction in paperwork, better utilization of

human resources and more presentable image increasing goodwill. The Initial Cost The initial cost of setting up the system will include the cost of hardware software(OS, add-on software, utilities) & labor (setup & maintenance). The same has to bear by the organization.

12. SYSTEM ANALYSIS

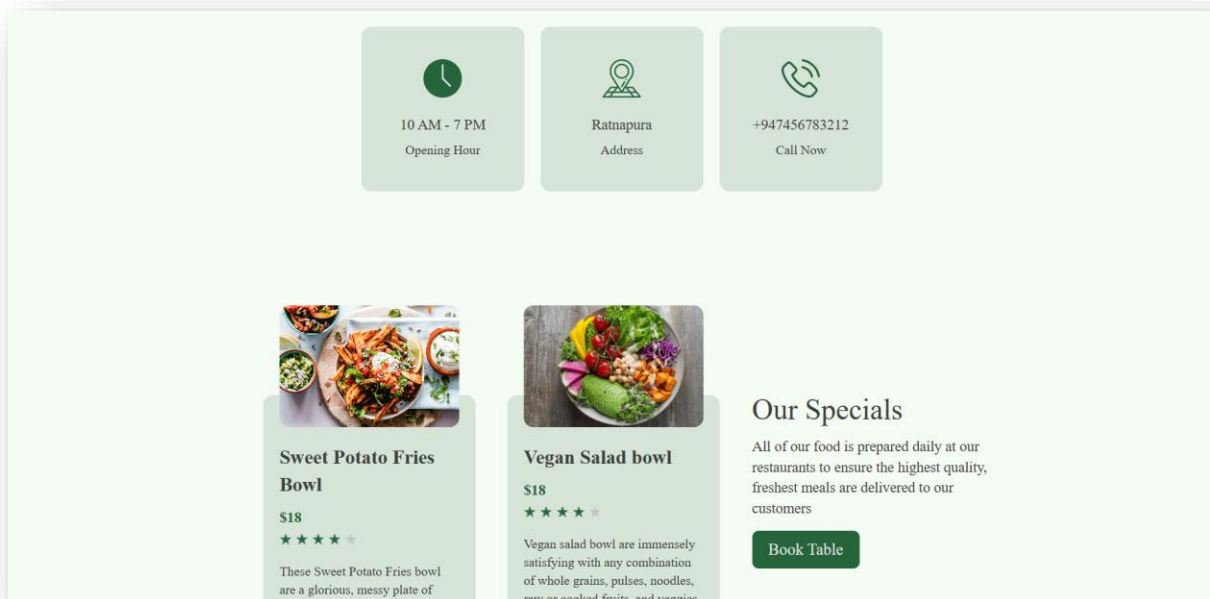

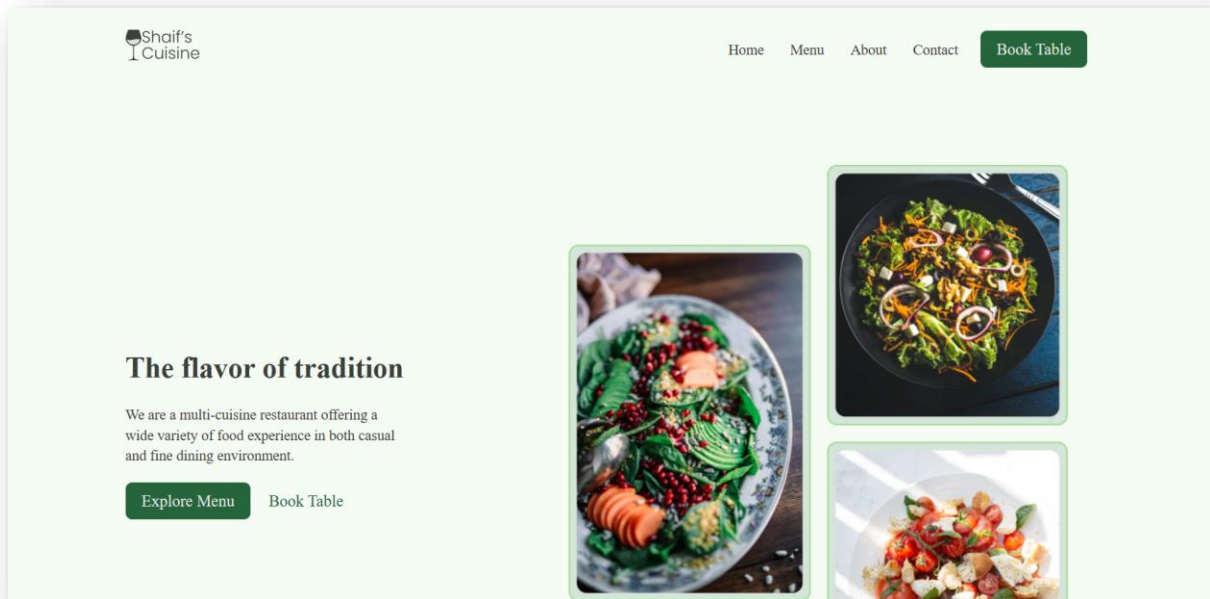

System analysis is a process of gathering and interpreting facts, diagnosing problems and the information about the Online Food Ordering System to recommend improvements on the system. It is a problem solving activity that requires intensive communication between the system users and system developers. System analysis or study is an important phase of any system development process. The system is studied to the minutest detail and analyzed. The system analyst plays the role of the interrogator and dwells deep into the working of the present system. The system is viewed as a whole and the input to the system are identified. The outputs from the organizations are traced to the various processes.

System analysis is concerned with becoming aware of the problem, identifying the relevant and decisional variables, analyzing and synthesizing the various factors and determining an optimal or at least as factory solution or program of action. A detailed study of the process must be made by various techniques like interviews, questionnaires etc. The data collected by these sources must be scrutinized to arrive to a conclusion. The conclusion is an understanding of how the system functions. This system is called the existing system. Now the existing system is subjected to close study and problem areas are identified. The designer now functions as a problem solver and tries to sort out the difficulties that the enterprise faces. The solutions are given as proposals.

The proposal is then weighed with the existing system analytically and the best one is selected. The presented to the user for an endorsement by the user. The proposal is reviewed on user request and suitable changes are made. This is loop that ends as soon as the user is satisfied with proposal. Preliminary study is the process of gathering and interpreting facts, using the information for further studies on the system. Preliminary study is problem solving activity that requires intensive communication between the system users and system developers. It does various feasibility studies. In these figure of the system activities can be obtained, from which the decision about the strategies to be followed for effective system study and analysis can be taken.

What Our Customers Say

Sayed Ahmed

★★★★★

"Visited WeLoveFood with friends last Sunday. Really lovely meal and very warm welcome – we would recommend this lovely restaurant and will try to go back again"

Arfan

★★★★★

"from start to finish, lovely experience. Hostess very pleasant, wait staff john was wonderful and attentive, food plentiful and delicious, desserts out of this world"

Fahim & Nishat

★★★★★

"A warm and friendly welcome with fantastic customer service. Always great, tasty food served piping hot- just the way we love it . Would definitely recommend. We have been repeatedly and it's consistently exceeded our expectations"

Hussain

★★★★★

"I would just like to say thank you for the excellent service we received in your restaurant last night. Although the place was very busy we still had an excellent time and really appreciated the live entertainment too!"

Fresh and delicious traditional Bangladeshi food to delight the whole family.

Our Story

It's all started since 2022

Welcome to Shai's Cuisine. We take pride in delivering warm, friendly service and creating mouth-watering culinary delights for all. Using only the freshest locally sourced ingredients, we'll ensure you have a dining experience to remember.

Since 2023, we are the perfect place for a romantic meal for two, a catch-up with friends, family parties, business meetings, and bringing loved ones together. With comfortable surroundings, affordable prices, and seating for up to 65 guests, we can cater for all occasions.

Our Goals

We shall sell delicious and remarkable food and beverages that meet the highest quality, freshness, and seasonality criteria while combining modern-creative and classic cooking traditions. By showcasing warmth, graciousness, efficiency, skill, professionalism, and integrity in our work, we will continually serve our consumers with exceptional service. To have every customer who comes through our doors leave impressed by their experience at Shai's Cuisine and excited to come back again.

15. CONCLUSION OF THE REPORT ONLINE FOOD ORDERING SYSTEM

Our project is only a humble venture to satisfy the needs to manage their project work. Several user friendly coding have also adopted. This package shall prove to be a powerful package in satisfying all the requirements of the school. The objective of software planning is to provide a frame work that enables the manger to make reasonable estimates made within a limited time frame at the beginning of the software project and should be updated regularly as the project progresses. At the end it is concluded that we have made effort on following points...A description of the background and context of the project and its relation to work already done in the area. Made statement of the aims and objectives of the project. The description of Purpose, Scope, and applicability. We define the problem on which we are working in the project. We describe the requirement Specifications of the system and the actions that can be done on these things. We understand the problem domain and produce a model of the system, which describes operations that can be performed on the system. We included features and operations in detail, including screen layouts. We designed user interface and security issues related to system. Finally the system is implemented and tested according to test cases.

16. FUTURE SCOPE OF THE REPORT

In a nutshell, it can be summarized that the future scope of the project circles around maintaining information regarding. We can add printer in future We can give more advance software for Online Food Ordering System including more facilities We will host the platform on online servers to make it accessible worldwide Integrate multiple load balancers to distribute the loads of the system Create the master and slave database structure to reduce the overload of the database queries Implement the backup mechanism for taking backup of codebase and database on regular basis on different servers The above-mentioned points are the enhancements which can be done to increase the applicability and usage of this project. Here we can maintain the records of Food Item and Category. Also, as it can be seen that now-a-days the players are versatile ,i.e. so there is a scope for introducing a method to maintain the Online Food Ordering System. Enhancements can be done to maintain all the Food Item, Category ,Customer, Order, Confirm Order. We have left all the options open so that if there is any other future requirement in the system.

END OF
THE
REPORT
